

**Research projects** 

# **NEXT – Quantum Biology**

Profile area: Exploration

Deadline: February 11, 2025 (02:00 PM CET)

This call aims to enhance the scientific understanding of the fundamental mechanisms underlying quantum effects in biological systems. The Volkswagen Foundation invites interdisciplinary collaborative research teams to experimentally validate theoretical hypotheses, thereby increasing the acceptance and recognition of the biological significance of quantum effects.

Within the funding framework "NEXT", the Volkswagen Foundation intends to take up new or little researched topics and research approaches that have a high knowledge potential and relevance for the future. The funding framework is the overarching umbrella for different thematic calls, all of which are intended to stimulate progress within the scientific landscape and to focus on what could be 'next', as the title of the framework indicates.

# 1 Objectives

A century ago, pioneers of quantum mechanics such as Erwin Schrödinger speculated about the possible role of quantum mechanical phenomena such as entanglement, tunneling and coherence in biological processes. Despite this long-standing hypothesis, the field still lacks conclusive evidence and – associated with this – a broad acceptance of the existence and relevance of quantum effects in biological systems.

The field is particularly challenging due to the multiscale nature of biological structures. Thus, new theoretical models and non-invasive experimental techniques are needed to observe these effects *in vivo* and to ensure that the results are relevant to real biological functions. The solution to this complex and challenging problem lies beyond the scope of a single discipline. Therefore, an integrative interdisciplinary collaboration between biologists and physicists is essential. However, such interdisciplinary approaches are also a challenge in itself.

The scientific and societal relevance of understanding quantum effects in biological systems is profound, as it promises groundbreaking discoveries that could revolutionize our understanding of biological systems. This research undoubtedly involves a high level of risk. The aim of this call for proposals under the funding framework "NEXT" is to provide the necessary impetus to stimulate the further development of this field and take it to the next level of acceptance in the scientific community and beyond.

### 2 Scope of Funding

The Foundation supports interdisciplinary research projects with 2 to 4 principal investigators (PIs), providing up to 2 million euros for a funding period of up to 5 years.

The call is open to postdoctoral researchers and professors in the natural and life sciences at German universities and other research institutions. Researchers from international institutions can participate as PIs, but the partner(s) from the German institution(s) should take the lead and be substantially involved in the project both financially and in terms of content. It is desirable to have a mix of early career and experienced researchers in the team.

The research team must include expertise in both biology and physics, with additional expertise, in, for example, chemistry or engineering being welcome. In order to improve the chances of success of the project, given the interdisciplinary nature of the field, existing collaborations and previous experience of the applicants in the respective interdisciplinary research are an advantage.

The aim of this call is the **experimental verification** of theoretical hypotheses underlying the existence of quantum effects in biological systems. We are looking for scientifically plausible hypotheses and ideas aimed at elucidating **physiological** and **functional mechanisms**. Pathophysiological mechanisms as well as purely theoretical, methodological or physical/chemical approaches without biological perspective are excluded from funding. Approaches that aim to increase knowledge only incrementally in areas where quantum effects have already been extensively explored are not the focus of this call.

#### **Overheads**

State and state-recognized universities and universities for applied sciences can apply for 10 %

overheads. This also applies for foreign universities. For more information on overheads, see "Information on lump sum for overheads", which is provided in our <u>download-section</u>.

#### **Open Science**

The Foundation is committed to Open Science (<u>Open Science Policy</u>). It is therefore expected that project results will be published open access and that data collected will be made available for scientific use via recognized repositories (see <u>NFDIs</u>, <u>re3data</u>, and <u>RIsources</u>). If data collection is intended, the essential information is to be presented in a data management plan (<u>basic data management plan</u> of the foundation or a more detailed data management plan of the respective discipline). In case no data is generated in the project, this needs to be explicitly stated in the application.

Note: For the later preparation of the project's research data, in the case of a grant, the offer <u>'Data Reuse - Additional funding for the preparation of research data'</u> is available.

#### **General Information**

The Foundation cannot be held responsible for any obligations entered into prior to the receipt of grant approval.

Applications that have been or are intended to be submitted in this or a similar form to another funding organization will not be processed by the Foundation. Applications that do not meet the formal requirements will not be submitted for review. The Foundation can only award funds to scientific institutions.

### 3 Application and Selection Procedure

#### 3.1 Time schedule

- February 11, 2025 (02:00 PM CET): Deadline for the submission of proposals.
- Summer 2025: Evaluation by an international and interdisciplinary peer-review panel.
- Expected in November 2025: Final decision by the Foundation's Board of Trustees.

#### 3.2 Procedure

First, the eligibility and formal criteria of the submitted applications are checked. Proposals that do not meet these requirements will not proceed to the peer-review stage. An international and interdisciplinary review panel will evaluate and discuss the eligible proposals.

The relevant assessment criteria are:

- innovative nature of the experimental approach
- high-quality research approach with the potential to significantly advance the field
- high-risk/high-gain character and potential impact for future research directions
- excellently qualified team constellation with regard to the feasibility and realization of the project

Written reviews are not collected. The Foundation's Board of Trustees will make the final decisions based on the panel's recommendations.

### 4 Application Checklist

#### 4.1 Our Funding Platform

Applications and short proposals have to be submitted via the Volkswagen Foundation's <u>funding</u> <u>platform</u>. All templates (CV, staff concept, expenditure plan, etc.) are available for download on the funding platform and on the website for the respective programme announcement. Please only use the templates available for download there when submitting your application.

It is important that all applicants (PI, co-PIs, etc.) register early on in the process. Co-applicant(s) can only be invited to work on an application if they have registered.

For further support please contact support@volkswagenstiftung.de.

#### 4.2 Application documents e.g.

All application documents must be submitted in English.

#### 4.2.1 Proposal according to the template file

For your proposal, please use the template available for download from the funding platform or from the initiative website.

#### 4.2.2 Expenditure Plan

Please use the Excel template available for download at the funding platform. It is not possible to upload and use other Excel sheets. For instructions on how to fill in the template, please refer to the respective help sheet.

Please note: Each co-Pl has to submit an individual expenditure plan.

- Personnel costs
  - Pls, postdocs, PhD candidates, research assistants, student assistants, non-research staff with technical or administrative tasks
  - funding of own position is possible
  - estimate personnel costs in consultation with the institution's administration; if this is not possible, use our average personnel rates
- Travel costs: project meetings, conference visits, research stays, workshops
- Publication costs (open access)
- Equipment >10,000 euros (>200,000 euros 50 % co-funding from institution expected)
- Other research funds: laboratory and consumables, equipment <10,000 euros, contracts for work and external services, literature, laptops, software/licenses

• Sustainability Funds: SustainabilityThe Volkswagen Foundation is committed to sustainability, and in particular resource-efficient research processes. It therefore provides funds to certify research laboratories involved in the research project via providers such as LEAF or mygreenlab as sustainable. These funds – granted in addition to the maximum funding sum – amount to a lump sum ofup to 3,000 EUR per laboratory. Laboratories are eligible if at least one of the PI/co-PIs conduct the respective research there. To apply, please indicate the correct lump sum in the expenditure plan at the corresponding position.

#### 4.2.3 Curriculum Vitae of every applicant

Please submit your scientific career in tabular-narrative form. A template is available on the funding initiative's website for this purpose.

#### 4.2.4 Staff Concept

The Volkswagen Foundation aims to promote good working conditions in academia. Please submit a staff concept using the "<u>Template Staff Concept</u>". Information on the staff concept as well as on funding for staff in general can be found <u>here</u>.

#### 4.2.5 Further application documents

- Data management plan (template available on the website)
- Ethical statement (if relevant)

### 5 Contact

Dr. Franziska Rönicke E-Mail: <u>roenicke@volkswagenstiftung.de</u> Phone: +49 511 83 81 – 262

Dr. Theresa Greupner E-Mail: <u>greupner@volkswagenstiftung.de</u> Phone: +49 511 83 81 – 363

For administrative/organisational issues Tatjana Peters E-Mail: <u>peters@volkswagenstiftung.de</u> Phone: +49 511 83 81 - 397 VolkswagenStiftung Kastanienallee 35 | 30519 HANNOVER | GERMANY <u>http://www.volkswagenstiftung.de/en</u>
